Cloud Services

TeamLogicIT®
Your Technology Advisor

Over the last few years more businesses have turned to the cloud to future proof their business. Cloud services allow you to work anytime, anywhere, across multiple devices. And today, more than ever, cloud solutions are the backbone to ensuring an effective remote workforce environment. What's more, the cloud subscription and consumption-based business model turns the capital expense of purchasing IT into an operating expense. This puts the latest technology within reach. Isn't it time you lift your business to the cloud with TeamLogic IT?
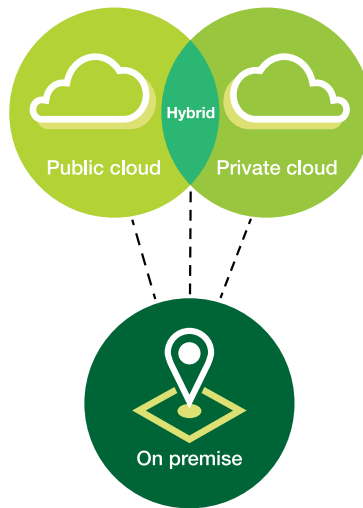

LIFT YOUR BUSINESS TO THE CLOUD

Choosing the right cloud service provider is important, however, it doesn't need to be a difficult task. Our technology advisors are available to help you find the right solution at the right price. We will ensure your business requirements are met and your migration to the cloud goes smoothly, with proper planning and a defined approach.

We help you determine what applications to move to the cloud and what to keep on premise, making the power of the cloud work for you. We will consider your business requirements, industry and regulatory compliance needs, current versions of software and hardware so you can get the most from your cloud investment. Whether you need public, private or a hybrid cloud solution, TeamLogic IT will help you get there.

ARE YOU READY FOR THE CLOUD?

Your network is the backbone of your business. Our Cloud Readiness Assessment will determine if you have bandwidth, reliability and security to access your cloud services. We will review your applications, data and infrastructure and recommend strategies for cloud migration. Consider starting with email, voice and cloud backup solutions. Other applications, such as accounting and directory services, may make more sense to keep on-premise.

At TeamLogic IT we remove the day-to-day complexity of moving your business to the cloud so you can get back to what you're passionate about— your business.

Hybrid
Public cloud   Private cloud

On premise
